(2006.01)

An apparatus for correcting one or more detected locations may include a processor and memory storing executable computer code causing the apparatus to at least perform operations including determining whether a detected location of a communication device was previously designated as an incorrect location. The computer program code may further cause the apparatus to enable provision of an option to a user of the communication device to select a specified correct location corresponding to the incorrect location in response to determining that the detected location was previously designated as the incorrect location. Corresponding methods and computer program products are also provided.
